

Mevsimlikten
"Her mevsim yemelik"

ABOUT US

Fruits and vegetables harvested in season and durable products for later use in Anatolian culture. It is almost like a tradition. Every August, in order to consume healthy products and prevent waste, most households make canned tomatoes or tarhana. Pickling seasons are not missed. Fruits picked in season take place in our pantries as jam or marmalade. Our mothers get very tired during the preparation of the products and complain about it. It was just such a day when we ask, ‘why don’t we do this work for them?’, ‘why don’t we offer it?’... We are “Mevsimlik Gıda” a company that employs only women and has been providing employment to women since October 2017. We produce homemade, natural and additive-free jams, pickles, sauces, tomato paste, etc. from seasonal fruits and vegetables and we are a company that offers products for sale through e-commerce. Apart from our own website, we also serve out-of-home consumption channels such as Moda Deniz Kulübü and Markus. In addition to these, we also serve you in retail channels such as Macrocenter stores and TazeDirekt. This year, our goal is to start exporting our products and expand our brand internationally. We prepare localized seasonal products that exist in Anatolian culture for you in a quality and safe way. We collect the raw materials for our products completely in season. We do not use preservatives or additives. We work by being sure of every material that goes into the products, knowing how and under what conditions the products are produced. We work with great care and dedication at every stage from the purchase to the sale of the products. You can consume our products with peace of mind.

Every food is beautiful in its season.

TARHANA & BLACK SEA DELIGHT

Black Sea Turkish Delight, known as groom's delight, is the protagonist of a centuries-old tradition in the eastern Black Sea region. Its biggest advantage is that it can remain intact for a long time. We recommend that cookie lovers try this product.

The rumor is that young girls who got married in the Black Sea region used to settle in the groom's house and live with their father-in-law and mother-in-law. The bride is young, time is old, respect is eternal. As such, our daughter-in-law would hesitate even to eat in her new home. That's why she would make these Turkish delights and bring them to her new home with her dowry. Since it was thought that she would not be able to eat and would go hungry, these long-lasting and high-calorie Turkish delights were sent to her new home with the girl so that she would not go hungry. There are other rumors as well. It is also said that this cookie was made for the groom from the girl's house and taken to the groom's house. In order to offer you this traditional and special taste, we produce Mevsimlik Black Sea Delight. This product, which can last for about 2 months without spoiling, can be prepared in desired shapes. However, the original shape is in the form of baklava slice. Since it is high in calories, we recommend you to try this product, which we prefer to sell in packs of 2.

BLACK SEA DELIGHT

It is recommended to consume within 1 week after opening.
Store in a cool place. Do not leave in sunlight. Produced on the same line as food containing gluten and egg.

WORKSHOP

We produce our products in season. We can work between May and November for the products we produce. "Workshop" so that our women can work in other months we brought our idea to life.

We started with wax candles! We received our trainings and prepared a wax set in mini jars of 4 for you.

Wax Candle Set

Fabric Napkin

6 pcs with Embroidered Edge – Red or Blue

Wax Candle

Gold Metal Box

Consuming Products in Season...

Today, it is an undeniable fact that we are becoming conscious about healthy nutrition as a society and trying to act accordingly. In this context, we research the benefits of fruits and vegetables and pay attention to what we eat. However, there is something we overlook or miss while doing all this. Consuming products in their own seasons! In our age, we can easily find every fruit and vegetable whenever we want. However, we need to consume products in their own seasons. Otherwise, unfortunately, we cannot see the benefit we expect from the products. The reason why fruits and vegetables that are not grown in season are harmful is related to the way these products are produced. By using various chemicals or hormones, products are allowed to grow and develop out of their seasons. Fruits and vegetables produced in this way have very low nutritional values. Their taste is incomparable with the products grown in season. Of course, products picked in season and dried or canned without additives should not be seen in this way. The pickles or preserves you make at home by buying the products in season are healthy and preserve their nutritional value. In this context, it is important to know which products are grown in which season.
